

POULTRY (CHICKEN & DUCK) PROCESSING LINE

015

CONVEYOR SYSTEM

The conveyor system in poultry processing line is critical component used to transport poultry products such as chicken or duck through various stages of processing efficiently. It streamlines the handling and movement of products from one processing station to the next, ensuring a smooth and organized workflow.

Vision

To optimizing efficiency and workflow of poultry processing through every stage using conveyor system

Material

Made of 304 stainless steel, meet the demands of food hygiene and safety.

Mission

Efficiently transport chicken products through various stages of processing, enhancing overall processing speed and hygiene.

Maintenance

Using a PVC belt, easy to clean, sanitize, replace, and highly flexible.
