

## BASKET LOADER & UNLOADER

This machine is an advanced automation solution designed for efficient handling of cans, pouches, jars, and other containers in food processing lines. This system is integral to the thermal processing stage, where it streamlines the loading and unloading of containers into retort baskets for sterilization. This system will help streamline operations, reduce manual labor, and increase the overall efficiency and safety of the sterilization process.

Function

**Automatically loads and unloads into the retort baskets, ensuring maximum space utilization and efficient heat transfer during sterilization.**

Material

**Made of 304 stainless steel, meet the demands of food hygiene and safety.**

Maintenance

**Stainless steel construction ensures maximum durability, easy to clean and maintenance.**
